Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)

(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 0 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 0 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

DETAILED ACTION

Allowable Subject Matter

1. Claims 17-34 and 56-66 are allowed.

2. The following is an examiner's statement of reasons for allowance: The closest prior art of record comprises: the Patent to Richardson (US 4,943,702) and Kovacevic et al. (US 5,481,085).Richardson teaches a method and apparatus for directing a beam of light onto a weld line to illuminate a weld joint and using the reflected light to analyze the weld line. Kovacevic teaches a method and apparatus for determining the weld pool dimension by illuminating the weld pool surface with light beam near-ultraviolet portion of the optical spectrum. However these prior art of record considered either individually or in combination fails to teach;

In claim 17: an arrangement at least one filter arranged in front of or in the reproducing means; a source of ultraviolet radiation, other than said welding head, that is configured and disposed so as to illuminate the welding area with ultraviolet radiation having at least one predetermined ultraviolet wavelength when the welding operation is being performed; wherein said filter comprises a band-pass filter configured for filtering around the predetermined ultraviolet wavelength; and real-time controller that controls at least one welding parameter, and other claimed features.

In claim 20: a method for monitoring a welding area of an object during a welding process by illuminating the welding area with ultraviolet radiation of a predetermined

Art Unit: 1793

ultraviolet wavelength by means of a source other than said welding head; reproducing the welding area while it is being welded; and filtering radiation from the welding area using a band-pass filter around the predetermined ultraviolet wavelength, and other claimed features.

In claim 56: method for monitoring a welding area of an object during a welding process by illuminating the welding area with ultraviolet radiation; reproducing the welding area; and filtering radiation from the welding area using a band-pass filter around a wavelength within the ultraviolet wavelength range, and wherein said band-pass filter that is adapted for filtering within a range which is smaller than at least one of the following: (a) 90 nm FWHM around said filter wavelength, (b) 70 nm FWHM around said filter wavelength, and (d) 10 nm FWHM around said filter wavelength, and (d) 10 nm FWHM around said filter wavelength, and other claimed features.

Though the combination of Richardson and Kovacevic et al. teaches illuminating the weld pool surface with light beam near-ultraviolet portion of the optical spectrum, and also filtering with a band pass filter, said combination does not necessarily render the claimed invention obvious because in Kovacevic, the laser light passes through an optical diffuser and then a grid of slits, and the corresponding slit pattern that is reflected from the weld pool is evaluated for any deformation that will indicate changes in the shape of the weld pool. Therefore, a band-pass filter is not needed in the combination of Richardson and Kovacevic et al., and also it is just a pattern of lines and not an actual image of the weld pool itself is analyzed, hence the combination does not yield the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
